**SILVER BULLET SET SCREW**

- Will Not Penetrate the Roof Seam
- Ball Point Head Eliminates Any Marring of Paint or Damage to the Roof Panel Seam
- Patented Design

The Solar Connection Kit is an innovative, UL 1703 & UL 2703 Listed, solar panel mounting system that can attach to virtually any solar panel frame using GroundBonding™ Technology to create a conductive bond from panel to panel without extra tools or parts. Each solar kit utilizes the cable management disc that allows for cables to be top loaded and secured, making cable management clean and simple. PushLock™ Technology secures the cable management disc to the standing seam base clamp without extra nuts or bolts. The Solar Connection Kit is compatible with the state-of-the-art Standing Seam Power Clamp that can attach to virtually any standing seam profile and provide unparalleled strength using patent-pending WaveLock™ technology with optional 1, 2, or 3 points of attachment. Offering ease of installation, the Silver Bullet™ set screws include a rounded bullet tip to maximize strength and won't damage the paint or pierce the seam.
